

PROPERTY	DESCRIPTION
<code>align-content</code>	Aligns items in a flex container along flex lines.
<code>align-items</code>	Aligns evenly spaced items in a flex container.
<code>align-self</code>	Aligns an item inside a flex container.
<code>all</code>	Resets all element properties to its default or inherited values.
<code>animation</code>	Creates an animating element.
<code>animation-delay</code>	Sets a delay before an animation begins.
<code>animation-direction</code>	Sets how, in which direction, an animation is played.
<code>animation-duration</code>	Defines the duration of an animation cycle.
<code>animation-fill-mode</code>	Defines how styles are applied before and after animation.
<code>animation-iteration-count</code>	Sets the number of times an animation is played.
<code>animation-name</code>	Defines a name for the animation.
<code>animation-play-state</code>	Sets the animation play state to running or paused.
<code>animation-timing-function</code>	Specifies the animation speed curve.

<code>backface-visibility</code>	Shows or hides the backface visibility of an element.
<code>background</code>	Sets the background of an element.
<code>background-attachment</code>	Defines how the background is attached to an element.
<code>background-blend-mode</code>	Defines the background layer blending mode.
<code>background-clip</code>	Defines how background extends beyond the element.
<code>background-color</code>	Sets the background color of the element.
<code>background-image</code>	Specifies a background image for an element.
<code>background-origin</code>	Specifies the background image origin position.
<code>background-position</code>	Sets the position of a background image.
<code>background-repeat</code>	Specifies how the background image is repeated.
<code>background-size</code>	Sets the size of the background image.
<code>border</code>	Specifies a border for an element
<code>border-bottom</code>	Specifies a bottom border for an element.
<code>border-bottom-color</code>	Sets the color of a bottom border .
<code>border-bottom-left-radius</code>	Sets the border radius of the bottom left corner.

<code>border-bottom-right-radius</code>	Sets the border radius of the bottom right corner
<code>border-bottom-style</code>	Sets the style of the bottom border.
<code>border-bottom-width</code>	Sets the width of the bottom border
<code>border-collapse</code>	Sets table borders to single collapsed line or separated.
<code>border-color</code>	Sets the color of the border.
<code>border-image</code>	Defines an image as border, instead of a color.
<code>border-image-outset</code>	Sets how far a border image extends beyond the border.
<code>border-image-repeat</code>	Defines if and how the border image is repeated.
<code>border-image-slice</code>	Defines how the border image will be sliced.
<code>border-image-source</code>	Specifies the url of the border image file.
<code>border-image-width</code>	Sets the width of the image border.
<code>border-left</code>	Sets the left border of the element.
<code>border-left-color</code>	Sets the color of the left border.
<code>border-left-style</code>	Sets the style of the left border.
<code>border-left-width</code>	Sets the width of the left border.

<code>border-radius</code>	Sets the radius of the border.
<code>border-right</code>	Sets the right border of the element.
<code>border-right-color</code>	Sets the color of the right border.
<code>border-right-style</code>	Sets the style of the right border.
<code>border-right-width</code>	Sets the width of the right border.
<code>border-spacing</code>	Sets the adjacent table cell distance.
<code>border-style</code>	Defines the style of the border
<code>border-top</code>	Sets the top border of the element.
<code>border-top-color</code>	Sets the color of the top border.
<code>border-top-left-radius</code>	Sets the border radius of the top left corner.
<code>border-top-right-radius</code>	Sets the border radius of the top right corner.
<code>border-top-style</code>	Sets the style of the top border.
<code>border-top-width</code>	Sets the width of the top border.
<code>border-width</code>	Sets the border width of the element.
<code>bottom</code>	Positions the element from the bottom of the relative container.
<code>box-shadow</code>	Adds a shadow effect to an element.

<code>box-sizing</code>	Sets how element height and width are calculated.
<code>caption-side</code>	Defines on which side of the table a caption is placed.
<code>caret-color</code>	Sets the color of the blinking mouse caret.
<code>@charset</code>	Specifies the character encoding of the stylesheet.
<code>clear</code>	Sets the element side that does not allow floating elements.
<code>clip</code>	Sets how an image is cropped or clipped inside a container.
<code>clip-path</code>	Clips an element inside a specific shape or SVG.
<code>color</code>	Specifies the color of text in an element.
<code>column-count</code>	Divides an element into the specified number of columns.
<code>column-fill</code>	Specifies how divided columns are filled.
<code>column-gap</code>	Specifies the space between divided columns.
<code>column-rule</code>	Sets the style, width, and color of a column divider.
<code>column-rule-color</code>	Sets the color of a column divider.
<code>column-rule-style</code>	Sets the style of a column divider.

<code>column-rule-width</code>	Sets the width of a column divider.
<code>column-span</code>	Sets number of divided columns an element should span.
<code>column-width</code>	Specifies the width of a divided column.
<code>columns</code>	Divide an element into columns of a certain width.
<code>content</code>	Used to insert content before or after an element.
<code>counter-increment</code>	Increase or decrease a CSS counter.
<code>counter-reset</code>	Initialize or reset CSS counter.
<code>cursor</code>	Specifies the shape of the mouse cursor.
<code>direction</code>	Specifies the text writing direction of a block-level element.
<code>display</code>	Specify an element's display behavior.
<code>empty-cells</code>	Specifies whether empty table cell borders will be displayed.
<code>filter</code>	Adds an image enhancing effect to an image.
<code>flex</code>	Specifies the width of the flexible items.
<code>flex-basis</code>	Specifies the initial width of a flex item.
<code>flex-direction</code>	Specifies the direction for the flex item to align.

<code>flex-flow</code>	Controls the direction and wrapping of flexible items.
<code>flex-grow</code>	Specifies how a flex item can grow inside the container.
<code>flex-shrink</code>	Specifies how a flex item can shrink inside the container.
<code>flex-wrap</code>	Specifies how flexible items wrap inside the container.
<code>float</code>	Sets how an element is positioned relative to other elements.
<code>font</code>	Sets font family, variant, weight, height, and size for an element.
<code>@font-face</code>	Embeds a custom font inside a web page
<code>font-family</code>	Sets the font family for an element.
<code>font-kerning</code>	Sets the spacing between the font's characters.
<code>font-size</code>	Sets the size of the font for an element.
<code>font-size-adjust</code>	Specifies a fall-back font size.
<code>font-stretch</code>	Sets the text characters to a wider or narrower variant.
<code>font-style</code>	Set the font style to normal, italic, or oblique.
<code>font-variant</code>	Specifies that text is displayed in a small-caps font.

<code>font-weight</code>	Sets the weight or thickness of the font.
<code>grid</code>	Defines a grid layout with responsive rows and columns.
<code>grid-area</code>	Sets the size and location of grid items in a grid container.
<code>grid-auto-columns</code>	Specifies the size of the columns in a grid container.
<code>grid-auto-flow</code>	Specifies the initial placement of items in a grid container.
<code>grid-auto-rows</code>	Specifies the initial size of the items in a grid container.
<code>grid-column</code>	Specifies the size and location of a grid item in a grid container.
<code>grid-column-end</code>	Specifies in which column-line the grid item will end.
<code>grid-column-gap</code>	Specifies the gap size between columns in a grid container.
<code>grid-column-start</code>	Specifies in which column line the grid item will start.
<code>grid-gap</code>	Specifies the gap size between grid rows and columns.
<code>grid-row</code>	Specifies the grid item size and location in a grid container.
<code>grid-row-end</code>	Specifies in which row-line the grid item will end.

<code>grid-row-gap</code>	Specifies the gap size between rows in a grid container.
<code>grid-row-start</code>	Specifies in which row line the grid item will start
<code>grid-template</code>	Divides a page into sections with a size, position, and layer.
<code>grid-template-areas</code>	Specifies area in a grid container.
<code>grid-template-columns</code>	Sets the number and width of columns in a grid container.
<code>grid-template-rows</code>	Sets the number and height of rows in a grid container.
<code>height</code>	Sets the height of an element.
<code>hyphens</code>	Specifies hyphenation with wrap opportunities in a line of text.
<code>@import</code>	Imports a style sheet inside another style sheet.
<code>justify-content</code>	Defines the alignment of items in a flex container.
<code>@keyframes</code>	Defines the CSS style to animate.
<code>left</code>	Positions the element from the left of the relative container.
<code>letter-spacing</code>	Sets the spacing between characters.
<code>line-height</code>	Sets the vertical spacing between lines of text.

<code>list-style</code>	Defines the markers (bullet points) for items in a list.
<code>list-style-image</code>	Defines an image markers (bullet points) for items in a list.
<code>list-style-position</code>	Sets the marker (bullet point) positions for items in a list
<code>list-style-type</code>	Defines the marker types (bullet points) for items in a list
<code>margin</code>	Sets the margin (outside spacing) for an element.
<code>margin-bottom</code>	Sets the bottom margin (outside spacing) for an element.
<code>margin-left</code>	Sets the left margin (outside spacing) for an element.
<code>margin-right</code>	Sets the right margin (outside spacing) for an element.
<code>margin-top</code>	Sets the top margin (outside spacing) for an element.
<code>max-height</code>	Sets the maximumn height for an element.
<code>max-width</code>	Sets the maximum width for an element.
<code>@media</code>	Applies media queries to a page.
<code>min-height</code>	Sets the minimum height for an element.
<code>min-width</code>	Sets the minimum width for an element.

<code>object-fit</code>	Specifies how an image or video fits inside a container.
<code>object-position</code>	Specifies the image or video position inside a container.
<code>opacity</code>	Sets the opacity (transparency) of the element.
<code>order</code>	Specifies the order of an item in a flex container.
<code>outline</code>	Adds an outline (highlighted border) to an element.
<code>outline-color</code>	Sets the color of an outline.
<code>outline-offset</code>	Sets the space between the outline and border.
<code>outline-style</code>	Sets the style of an outline.
<code>outline-width</code>	Sets the width of an outline.
<code>overflow</code>	Specifies the flow of content that exceeds the container.
<code>overflow-x</code>	Specifies the flow of content that exceeds the container width.
<code>overflow-y</code>	Specifies the flow of content that exceeds the container height.
<code>padding</code>	Sets the spacing between content and element border.
<code>padding-bottom</code>	Sets the spacing between content and bottom element border.

<code>padding-left</code>	Sets the spacing between content and left element border.
<code>padding-right</code>	Sets the spacing between content and right element border.
<code>padding-top</code>	Sets the spacing between content and top element border.
<code>page-break-after</code>	Adds a print page-break after an element.
<code>page-break-before</code>	Adds a print page-break before an element.
<code>page-break-inside</code>	Specifies if print page-break is allowed inside an element.
<code>perspective</code>	Adds perspective to a 3D-positioned element.
<code>perspective-origin</code>	Sets the origin of the perspective for a 3D-positioned element.
<code>pointer-events</code>	Specifies whether element reacts to pointer events or not.
<code>position</code>	Sets the element's positioning method.
<code>quotes</code>	Defines the quotation marks to be used on text.
<code>right</code>	Positions the element from the right of the relative container.
<code>scroll-behavior</code>	Specifies the scrolling behavior of an element
<code>table-layout</code>	Aligns elements according to a table with rows and columns.

<code>text-align</code>	Sets the alignment of text inside an element.
<code>text-align-last</code>	Sets the alignment for the last line of text.
<code>text-decoration</code>	Defines the style and color of underlined text.
<code>text-decoration-color</code>	Defines the color of underlined text.
<code>text-decoration-line</code>	Defines the kind of line to use with text.
<code>text-decoration-style</code>	Defines the style of underlined text.
<code>text-indent</code>	Sets the indentation to the beginning of text.
<code>text-justify</code>	Defines the text justification inside a container.
<code>text-overflow</code>	Sets the display behavior of text that overflows a container.
<code>text-shadow</code>	Adds a shadow effect to text.
<code>text-transform</code>	Defines text capitalization or casing.
<code>top</code>	Positions the element from the top of the relative container
<code>transform</code>	Applies a 2D or 3D transformation to an element.
<code>transform-origin</code>	Sets the origin for the transformation of the element.
<code>transform-style</code>	Specifies the display behavior of 3D space nested elements.

<code>transition</code>	Creates transitions from one property value to another.
<code>transition-delay</code>	Creates a delay before the transition effect starts.
<code>transition-duration</code>	Specifies the time the transition will take.
<code>transition-property</code>	Specifies the CSS property that will transition.
<code>transition-timing-function</code>	Defines the speed curve function of the transition.
<code>user-select</code>	Specifies how text can be selected (highlighted)
<code>vertical-align</code>	Specifies vertical alignment of an element.
<code>visibility</code>	Specifies the visibility of an element.
<code>white-space</code>	Specifies how white-space is handled inside an element.
<code>width</code>	Sets the width of an element.
<code>word-break</code>	Specifies how line breaks take place.
<code>word-spacing</code>	Sets the spacing between words.
<code>word-wrap</code>	Specifies how long words can be wrapped.
<code>writing-mode</code>	Sets the text reading orientation: top to bottom, etc.

---

`z-index`

Sets the vertical stacking order relative to other elements.
